

# Mobile multi component analyser

Mobile measuring system for temporary emission measurement of pollutants in flue gas and for process control

## APPLICATION

The MCA 14 m measures the concentrations of up to ten infrared gas components and evaluates them internally. Visualisation, operating and data logging are realised via the delivered software.

The unique characteristic is that instrument air supply is not necessary for its operation. The zero point setting is carried out with ambient air.

## YOUR BENEFITS AT A GLANCE

- mobile hot gas analyser system in small format
- no instrument air necessary
- continuous, extractive measurement of up to ten infrared components and oxygen
- field-proven components, modern photometer technology
- self-sustaining operation by pump supply
- long operation times, high reliability
- easy placement directly at the measuring point
- pre-calibrated → immediately deployable
- integrated zero gas provision with ambient air
- visualisation and operating via delivered software
- optionally integrated thermal printer or RS232 connection for data output

## PRECONDITIONS ON SITE

- installation place indoors and dust-free with protection against wetness and percussions/vibrations
- provision of non-contaminated ambient air for zero point setting
- power supply and PC/laptop/tablet\* with USB interface (resolution min. 1024 x 768 Pixel; Windows XP Professional upwards for installation of delivered user software)
- appropriate gas sampling

\* tablet as additional device available (option)
